

190+ libraries use **Perma.cc** to preserve links

260,000+ links archived with **Perma.cc**

---

## What is Perma.cc?

Websites change or go away, and when they do, linked citations can lead to broken, changed, or even malicious pages. This is known as **link rot**.

**Perma.cc** helps scholars, journals and courts prevent link rot by creating permanent, unalterable links to the online sources that they cite.

---

## How does Perma.cc work?

- Enter the URL of the page you want to preserve
- Perma visits the page and preserves it, depositing a copy into our collection and returning a unique URL— a **Perma Link** — that points to that record.

You can now use that Perma Link to give others access to a stable, accurate record of the referenced source.

---

## Why is it a good idea?

**Link rot** can undermine legal writing, scholarship, or any instance where the accuracy of information cited is paramount. **Perma.cc** prevents link rot by archiving a copy of the source and preserving it through our network of libraries.
